

2021: Volume 67, Issue 4

Dear Reader

*GeoScience Engineering* is an open access, peer-reviewed periodical journal aimed at publishing research results in Earth Sciences, Mining and Geological Engineering. The journal is published by the Faculty of Mining and Geology, VSB-Technical University of Ostrava, Czech Republic, and has been listed among peer-reviewed periodicals published in the Czech Republic since 2010.

We aspire to publish high-quality professional articles from all over the world, both from well-established authors and younger researchers. To stimulate the international exchange of knowledge and research findings, we provide scholars and practitioners with space to publish their original professional articles, reviews, and technical briefs, thus contributing to the interconnections of the academic and industrial sectors.

To communicate with international audiences, we publish in English. All articles are subject to a blind review process. All submissions are judged as for their relevance from the professional perspective, methodology, novelty of research findings, practical implications, and quality of presentation.

The current issue consists of 6 articles on different aspects of Earth Sciences, Mining and Geological Engineering ("Integrated Geophysical Investigation of River Ogun Floodplain, Papalanto, Southwestern Nigeria" by Ijaleye et al.; "Analysis of the Geothermal Energy Utilization of Mine Water from Rožná I Mine, Czech Republic" by Vokurka et al.; "Extreme Rainfall-Runoff Events Modeling by HEC-HMS Model for Koudiet Rosfa Watershed, Algeria" by Haddad and Remini; "Testing Polygon for Simulated Vertical Displacement Measurements based on Co-located InSAR Corner Reflector and GNSS Station" by Struhár et al.; "Use of Polymeric Energy Absorption Liners to Improve the Concrete Rock Fall Barriers" by Kömürlü; and "Measuring Magnetic Susceptibility to Determine Deposits in Field Archaeological Research at the Mikulčice Site" by Šindelář et al.)

Sincerely

*Alena Kašpárková*

Editor-in-Chief
