

GeoScience Engineering

2021: Volume 67, Issue 3

Dear Reader

GeoScience Engineering is an open access, peer-reviewed periodical journal aimed at publishing research results in Earth Sciences, Mining and Geological Engineering. The journal is published by the Faculty of Mining and Geology, VSB-Technical University of Ostrava, Czech Republic, and has been listed among peer-reviewed periodicals published in the Czech Republic since 2010.

We aspire to publish high-quality professional articles from all over the world, both from well-established authors and younger researchers. To stimulate the international exchange of knowledge and research findings, we provide scholars and practitioners with space to publish their original professional articles, reviews, and technical briefs, thus contributing to the interconnections of the academic and industrial sectors.

To communicate with international audiences, we publish in English. All articles are subject to a blind review process. All submissions are judged as for their relevance from the professional perspective, methodology, novelty of research findings, practical implications, and quality of presentation.

The current issue consists of 5 articles on different aspects of Earth Sciences, Mining and Geological Engineering (“Geological and Geochemical Prospecting for Gold Mineralization in Bode-Saadu Axis, Southwestern Nigeria” by Adebayo and Obasaju; “An Investigation of Foam Concrete Usability as a Cavity Filler Material in Mining” by Komurlu; “Seed Rain of Selected Subsidence Basins in Karviná Region – Preliminary Results” by Plohák et al.; “Geophysical Investigation as an Aid to Understanding Complex Geological Terrain: A Case of Yikpata Transition Zone in Share, North-Central Nigeria” by Danga et al.; and “Shutter of the Artesian Well Gushing Abandons in Monzoungoudo, Benin” by Hountondji et al.)

Sincerely

Alena Kašpárková

Editor-in-Chief
